FOREWORD

For over half a century, the Central Statistical Office (CSO) has been compiling the Consumer Price Index (CPI) for the Kingdom of Eswatini. The CPI is an economic indicator which is primarily used to calculate national inflation rate figures as well as the Harmonized Consumer Price Indices (HCPI) for both COMESA and the SADC regions. Apart from monitoring a country's economic performance, the CPI has been mainly used for deflating National Accounts, inflation targeting and forecasting; and proxy for wages and salary adjustments, among others.

To this end, the CSO would like to greatly appreciate the continuous technical support received from the International Monetary Fund (IMF), the financial support from the Central Bank of Eswatini and the CSO staff for their immense contribution, dedication and commitment to the production of this report. Special thanks also go to the establishments/outlets who have shown cooperation ever since we started compiling this indicator. Their continued cooperation with the CSO is appreciated and encouraged for the successful and continued compilation of the CPI in the Kingdom of Eswatini.

THEMBINKOSI SHABALALA
DIRECTOR OF STATISTICS

Consumer Price Index for February 2026

Key findings:

The headline inflation rate in February 2026 (i.e. the annual percentage change in the CPI in February 2026 compared with that of February 2025) for the country is 1.9%. This inflation rate is 0.2 percentage points lower than the 2.1% observed in January 2026. The 1.9% observed in February 2026 is 2.1 percentage points lower than the inflation rate of 4.0% observed in February 2025.

In February 2026, the inflation rate for goods is 1.9% and for services, it is 2.0%.

The Month-on-Month inflation rate (i.e. the percentage change in the CPI in February 2026 compared with that of January 2026) is -0.1%. This inflation rate is 0.4 percentage points lower than the 0.3% inflation rate observed in January 2026.

Year on Year Highlights (February 2026 compared with February 2025)

- Alcohol beverages, tobacco and narcotics, which decreased from 11.8% in February 2025 to 4.7% in February 2026. This is due to slower growth rates observed significantly in wine and beer, in this category.
- Health, which decreased from 4.4% in February 2025 to 0.5% in February 2026. This is due to zero growth rates observed in medical services, in this category.
- Miscellaneous goods and services, which decreased from 6.3% in February 2025 to 2.5% in February 2026. This is due to slower growth rates observed mainly in hairdressing salons and personal grooming establishments, in this category.

Month on Month Highlights (February 2026 compared with January 2026)

- Education, which decreased from 2.6% in January 2026 to 0.0% in February 2026, where zero growth rates were observed in this category.
- Miscellaneous goods and services, which decreased from 1.6% in January 2026 to -0.3% in February 2026, where zero growth rates were observed mainly in insurance and financial services, in this category
- Clothing and footwear, which increased from -0.5% in January 2026 to 1.1% in February 2026, where growth rates were observed in both garments and footwear, in this category.

CONSUMER PRICE INDEX METHODOLOGY

1. Defining the CPI

The CPI is a measure of the changes over time in the general level of prices for consumer goods and services that households acquire, use, or pay for.

2. Uses of the CPI

The CPI serves the following main purposes, among other uses;

- A measure of changes in the cost of living
- An escalator in contracts and as a guide for adjusting salaries and other forms of remuneration.
- A macro-economic indicator of inflation in the economy, informing policy decisions especially for monetary and fiscal policy.
- Deflation of national accounts and other economic statistics to derive volume measures

3. CPI weights

The weights of the CPI represent the shares of total expenditure of all households within the Eswatini borders. The weights are based on data from the 2016/17 Household Income and Expenditure Survey (HIES) and June 2020 is the index reference period i.e. June 2020=100.

4. Price Collection

The CSO collects prices for goods and services in selected retail outlets in the country. These outlets are spread throughout the four regions of the kingdom. They are collected within the first 3 weeks of every month through field team visits as well as websites and publications of service providers.

5. Classification

The CPI is classified according to the Classification of Individual Consumption according to purpose (COICOP), which is the international standard of classification for household consumption expenditures.

6. Index calculation

The country uses the Laspeyres type of index formula to compile the CPI. Two steps are used to calculate the indices for the CPI.

- a) The lower level or elementary index is the first index level for which weights are not assigned. It is calculated as a geometric mean of price changes for the sample of matched prices.
- b) The upper-level index is a geometric Lowe index - the weighted geometric average of elementary indices.

7. Index reference period

The index reference period is June 2020. It is changed from time to time and done in line with international best practice.
